

AVIATION

YOUR BLOG ABOUT PLANES

PT1: A TALK ABOUT AVIATION

WHAT IS AVIATION

Aviation is a subject that the main thing about it is planes and we are not just talk about planes we are going beyond that.

For beyond I mean like plane parts the manufactures stories models and aviation physics.

WHY I LIKE AVIATION

First of all you need to have the feelings about planes (like me) and I had this feeling from childhood I really liked to see and know about these planes and then I started studying when a friend of mine gave a book about the history of planes.

And then I started to use internet for aviation and now am a kind of an avgeek (that's what we call ourselves 😊)

THE BASICS ABOUT AVIATION

Yes planes we have to know about the manufactures and the types

For manufactures we all know the 2 main that now we just have work with these 2. airbus and Boeing.

These 2 are the main airplane producers and most of the market are from these 2 manufactures.

MANUFACTURES

After we talked about airbus and Boeing we then have a step closer and we will have a talk about some smaller manufactures like emberaier, bombardier, Tupolev, Ilyushin and much more.

yh ik it's a lot but we will learn this shortly and we understand all planes

AVIATION EVENTS

Along with the planes there is lot of events too like the Oshkosh airshow that is still operating now when am writing this blog (2023/9/11) nice date ☺

Or like the France airshow 2023 that happened this year and we got showed the new 777X and 737 Max 10

AIRCRAFT PARTS AND AIR CRASH INVESTIGATIONS

Airplane has ton of parts and we must know some of the main ones and sometimes some parts maybe make an aircraft crash who knows

Some big investigations like the air France 447 and Malaysia air 370

Not for hate

OK

This is a short talk about aviation so I will see you at the next parts 😊

With pleasure
